Working Features
- Front end of website
- Random number generator with fixed input

Next Steps
- Working on wind direction input for random number generator
- Creating backend of website
    - Database for profile login info
    - Database for holding the random strings if user requests it
    - Connecting the random number generator to a server to send to website
- Creating a queue if multiple people request random strings at similar times

The TA asked that since the workload up to this point has not been evenly distributed those that have not contributed as much to start contributing more. Part of this issue was with what we chose to work on first but will keep reassessing this issue to make sure all members equally contribute.
